Autocue workflow

Autocue will showcase its complete and affordable end-to-end broadcast and production workflows including newsroom, automation, media management, video servers and teleprompters through its distributor UBMS.

Autocue's video servers will feature a further extension of its functionality including new graphics handling to display logos, tickers, captions and clock. The company will also display a full range of best-in-class teleprompters from its LED-backlit Master Series to entry-level Starter Series, including iPad prompters.
