

### aQ Broadcast Integrates **Newsroom and Workflow**

**AT NAB 2015**, aQ Broadcast will feature an integrated range of Newsroom, Scripting, Automation and Media Management software alongside Video Server and Production Suite hardware.

QNews provides script and rundown management as well as newsroom automation. QNet networked scripting offers a wide range of multi-user, multi-column script production tools.

QTx transmission automation software provides an inexpensive solution in environments where output consists of both live and pre-recorded content.

QMedia management software provides media management functionality, including ingest, review, deletion, transfer, and proxy handling, including archive and restore.

aVS Video Servers scale from entry-level, two-output units to large, flexible and redundant storage and port solutions. aVS firmware options are available for marking, sub-clipping, conforming, transcoding, streaming, transferring and delay looping.

aPS Production Suite is an integrated production solution that combines components from a typical studio workflow into a single cost-effective system to enable users to create a complete, scripted television production.
